Volume 46, 1990, Numbers 1–3

CONTENTS

Number 1 PAGE

Mechanism of ethanol induced hepatic injury: *C. S. Lieber* 1
A role for 5-HT in the action of antidepressant drugs: *P. J. Cowen* 43
Drug glucosidation: *B.-K. Tang* 53
Leukotrienes and inflammation: *S. D. Brain and T. J. Williams* 57
Metabolism of drugs and other xenobiotics in the gut lumen and wall: *K. F. Ilett, L. B. G. Tee, P. T. Reeves and R. F. Minchin* 67
Metabolic activation and biological effects of nitrosamines in the mammalian lung: *H. M. Schuller, M. Falzon and J. B. McMahon* 95
The metabolic basis of 3-methylindole-induced pneumotoxicity: *T. M. Bray and J. B. Kirkland* 105
Multiple neurochemical and behavioral consequences of stressors: Implications for depression: *H. Anisman and R. M. Zacharko* 119
Potassium channel toxins: *P. N. Strong* 137

Number 2

Beta-blockers and central nervous system side effects: *J. McAinsh and J. M. Cruickshank* 163
Measurement and cardiovascular relevance of partial agonist activity (PAA) involving β_1- and β_2-adrenoceptors: *J. M. Cruickshank* 199
Metabolism and action of amino acid analog anti-cancer agents: *G. S. Ahluwalia, J. L. Grem, Z. Hao and D. A. Cooney* 243
Enantiomers in arthritic disorders: *K. M. Williams* 273
The genetic polymorphism of debrisoquine/sparteine metabolism—molecular mechanisms: *U. A. Meyer, R. C. Skoda and U. M. Zanger* 297
Effect of anxiolytics and antidepressants on extinction and negative contrast: *C. F. Flaherty* 309

Number 3

Ethologically-based animal models of anxiety disorders: *R. G. Lister* 321
Phenytoin: Pharmacogenetic polymorphism of 4′-hydroxylation: *T. Inaba* 341
Molecular genetics and the future of pharmacogenetics: *U. A. Meyer* 349
Interactions of anxiolytic and antidepressant drugs with hormones of the hypothalamic–pituitary–adrenal axis: *S. E. File* 357
The genetic polymorphism of debrisoquine/sparteine metabolism—clinical aspects: *M. Eichelbaum and A. S. Gross* 377
The opioid system in neurologic and psychiatric disorders and in their experimental models: *K. Gulya* 395
Peptides and vasomotor mechanisms: *M. C. Mione, V. Ralevic and G. Burnstock* 429
Genetic and cellular basis of multistep carcinogenesis: *J. A. Boyd and J. C. Barrett* 469
